Re: OTTO Supply Chain Statement on Russian Sanctions

Dear Valued Customer:

OTTO Engineering Inc. is a global leader in the manufacturing of Control and Communication Solutions. As such, we strive to maintain a world class supply base. As a highly vertically integrated manufacturer, we internally manufacture most components required for our products but do procure raw materials and ancillary components needed to produce our finished goods.

We are informing you that we require our suppliers to **not** utilize materials and/or suppliers from the country of Russia. In addition, there are no material certifications that we receive that contain Russia as the Country of Origin.

Should we be informed about any potential impact we will notify you promptly.

We will continue to closely monitor this situation to ensure there are no supply chain related issues with fulfilling your orders.

We thank you for your business.

Regards,

Scott Bolanowski
Director of Quality
